Tree: Postorder Traversal

Complete the *postOrder* function in your editor below, which has 1 parameter: a pointer to the root of a binary tree. It must print the values in the tree's postorder traversal as a single line of space-separated values.

Input Format

Our hidden tester code passes the root node of a binary tree to your *postOrder* function.

Constraints

$1 \leq$ Nodes in the tree ≤ 500

Output Format

Print the tree's postorder traversal as a single line of space-separated values.

Sample Input

```
    1
     \
      2
       \
        5
       / \
      3   6
       \
        4
```

Sample Output

```
4 3 6 5 2 1
```
